Pursing Mtech in Vision and Intelligent Systems from IIT Kharagpur,

5year experienced AWS developer in TATA Consultancy Services, worked in data ingestion, data integration,

Different AWS services like AWS lamba, DynamoDB, Step Function, SAM etc.

Objective:

- To obtain a competitive, responsible and rewarding position in an esteemed organization which offers stimulating and challenging work environment with ample scope of growth in the areas of AWS and Devops.

Note:

- I am looking for an internship postion in any company for 2months ideally from May to JULY. Have first hand experience AWS Redshift, Athena ,Glue, Lambda ,S3, DynamoDB, SAM, CLOUDWATCH, XRAY etc. It's preferred if they have ppo opportunities, I already have first class experience in above technologies, in real time project with several clients of TCS for 5 years.

Experience Summary:

- Total 5 years of experience in Amazon Web Services, CI/CD, Glue etc.
- 6 months experience in ML classification algorithm like Logistic Regression, Random Forest, Decision Tree etc.
- Hands-on experience in different services like Lambda, API Gateway, DynamoDB, Python,RDS, ELB,ASG, EC2,IAM,KMS,STEP FUNCTION, SAM,EBS, INSTANCE STORE, ELASTIC BEANSTALK,CLOUD FORMATION.

- Hands-on experience in above technologies as well as Amazon SAGEMAKER to implement NLP, with NMF and LDA algorithm..
- Experience in working with Agile team as a Developer and worked with jira and Azure Devops board as an ITSM tool

- Worked in API creation with POST request , and python request module and python logger utility .
- Worked in SMB protocol and pushing code in on premise server.
- Worked in R pipeline creation along with S3 bucket, to ingest data from one staging layer to business.
- Worked in ETL pipeline creation using AWS Glue Crawler,AWS Job through Pyspark and orchestration through AWS workflow and more refurbished approach through S3 event notification and AWS Lambda.
- Experience in working with PostgreSQL Database , sqlalchemy, boto3, in lambda, exposure to Amazon Athena as a query engine and Amazon Redshift as a data warehouse,
- Experience in PySpark and python script development in lambda
- Worked in Pylint, Bandit, Checkov and Black like Code improvement tool and AWS X-RAY and Cloudwatch for monitoring.
- Handson in RDS,Route53 like services.

Professional Experience:

- AWS and ML Engineer in **Tata Consultancy Services** for life science client like Bayer,
- AWS Enginer in Tata Consultancy Services for banking client like Unicredit AWS and Python Engineer with insurance client like Legal And General.
- Python Development,and little exposure in Dataiku with clients like Aviva Life insurance .
- Full pipeline development and orchestration using AWS S3,AWS Glue, and athena with clients like NGM(SPNI)

Educational Summary:

Course	**University/Board/Council**	**Passing Year**	**Percentage**
Mtech	**IIT Kharagpur(Pursuing, 6months)**	**2027**	
B.TECH	IIEST SHIBPUR	2020	8.26(DGPA)
HSC(10+2)	West Bengal Council Of Higher Secondary Education	2016	90%
SSC(10)	West Bengal Board Of Secondary Education	2014	87%

Company Name	Start Date	End Date	Total Experience
Tata Consultancy Services	02/11/2020	25/07/2025	4.72 years

Specializations:

1. IMAGE AND VIDEO PROCESSING
2. COMPUTER VISION
3. DEEP LEARNING
4. PATTERN RECOGNITION AND MACHINE INTELLIGENCE
5. EMBEDDED SYSTEM
6. ADVANCED OPERATING SYSTEM
7. LEARNING THEORY
8. GENERATIVE AI
9. SECURE COMMUNICATION USING CRYPTOGRAPHY
10. 3D COMPUTER VISION
11. CAMERA CALIBRATION, MODELLING, STEREO IMAGING(DISPARITY)
12. NATURAL LANGUAGE PROCESSING, AND LLM

Research Experience:

- Pursuing Research on Learning Theory and Optimal transport, in IIT Kharagpur, and project on the same.

Seminar :

- **Presented on Pixel reconstruction of a distorted image using Quaternion Matrix**

Technical Skills:

Languages : Python(Major),C++,C(optional) ,Java
Database : DynamoDB,RDS, Aurora ,POSTGRESQL
Core Competency : AWS((Lambda, DynamoDB,API Gateway, Code Commit, Code Pipeline, RDS, ELASTIC BEANSTALK,EBS, STEP , FUNCTION,EC2,IAM,Glue,S3,EBS,SSM,secret manager), Docker, EKS, Terraform, Azure Devops,PYSPARK,DATABASE,Python Development.
ITSM Tool : Jira , Azure Devops, Confluence
Operating Systems : Windows, Little in Linux
Other Tools : Git, GitHub,GitLab,AWSCodeCommit

License & Certification:

AWS Certified Developer Associate(AWS CERTIFICATION)
AWS Certified Solution Architect (UDEMY CERTIFICATION)
Natural Language Processing (Udemy Certification)
AWS Certified Devops Engineer(Udemy Certification)

Award & Achievement:

1. Won TCS GEMS for BEST TEAM AWARD from TCS
2. Won Top Contributor award during ILP training in TCS
3. Cleared TCS Digital Milestone with distinction in Machine Learning and Python

Project #1 Maldives

Client : Legal And General
Role : AWS Engineer
Duration:June 2022-- Still working
Environment : Lambda, STEPFUNCTION, DynamoDB,SAGEMAKER, SAM,API GATEWAY,Python etc.
The scope of this module was we were extracting different data like Pension plan number, national insurance number, customer surname etc from manually written form, and then process it using various AWS services and send automate the solution,

the project has different aspects like gone away, downstream application integration,like EG, onpremise server integration like NetApp.
Responsibilities:

- Writing extensive code in lambda,
- Interacting with. Database like DynamoDB, asynchronous services like Sqs,Sns, concurrency handling.
- Writing code to interact with on premise server like NetApp from AWS..
- Credential storing service like Secret Manager, SSM Parameter Store.
- Worked with IAM role, EC2 configuration,SSH,Putty etc.
- Wrote code for unsupervised NLP algorithm like NMF and LDA to get cluster of words for document classification.
- Lambda Concurrency handling using asynchronous invocation and event source mapping.

Project # 2. Unicredit

Client: Unicredit Bank
Role : AWS Engineer
Duration: - 3 months
Environment : Amazon RDS
Description: Banking project for Banking Website creation , infrastructure for audit, and backend

Responsibilities:

- I worked with few database creation in RDS. and some Aws services like EC2 for server.

Project Name: DMS-RCA

Client: Bayer

Role : ML Engineer

Duration: January 2021--- April 20222

Environment : **R,Rshiny , AWS**

We worked in a use case of a German client Bayer which has a pharmaceutical plant Garbagnate, where we implemented different ML algorithm to analyse different root cause,of their deviation.

Responsibility:

- Wrote AWS glue script for data ingestion from database.
- Created R Data Pipeline for transforming data and load it onto staging layer from business.
- Data was ingested from Business to R environment and then we performed EDA, Feature selection and implemented ML algorithm like decision tree, GBM, Logistic Regression etc
- Worked in RShiny to visualise data and pushed the code images in ECR.

Project Name : SPNI-ZEEL-MERGER

Client: SPNI AND ZEEL

Role : AWS DEVELOPER

Duration : February 16th 2023 -- 31st December 2024

Environment: AWS

Project Responsibility and Description:

We worked for the Indian client Sony Pictures and Zee Television, where the project objective was to support in Data Engineering and ETL pipeline creation as Sony and Zeel are going to be merged, we extracted there several reports like HR, Ad-sales using SuccessFactor, from onpremise DB and dump into S3 raw layer, where from we took it into S3 Staging Layer by some data cleaning and data reformatting, followed by that we exported the data in S3 Harmonized or Curated layer where we unioned the data of both SONY and ZEEL. In this process we used AWS Glue Crawler to populate the database tables against each layer data in S3, eventually we used AWS Glue job to export , transform and applying business logic. Eventually we used orchestration using AWS workflow to automate the process. Meanwhile we used S3 event notification and AWS Lambda for event based pipeline creation.

- I was responsible for all pipeline, pyspark,lambda, event notification and orchaestration,.

- Created couple of reports using PYSPARK script and loaded data in AWS S3 .
- Also loaded the file from S3 into Athena and forwarded to SFTP .

Project Name : AVIVA

Client: AVIVA LIFE DOMAIN

Role : AWS DEVELOPER

Duration : February 16th 2024-- Ongoing

Environment: AWS,DATAIKU

Project Responsibilities and Description:

To develop custom python code and creating scenarios and recipes to process dataset and orchaestrate the flow in data iku project for being handled in several Downstream application. Work in data processing logic using pyspark, also to develop Code in ADO, managing and organising the release flow orchaestration using XLR.

1. Major work in Python data processing logic development querying various projects its datasets, users, groups, dataiku apis , scenario creation and its deployment in target infrastructure.
2. SQL to query only relational data , DDL, DML statements.
